THE LINK

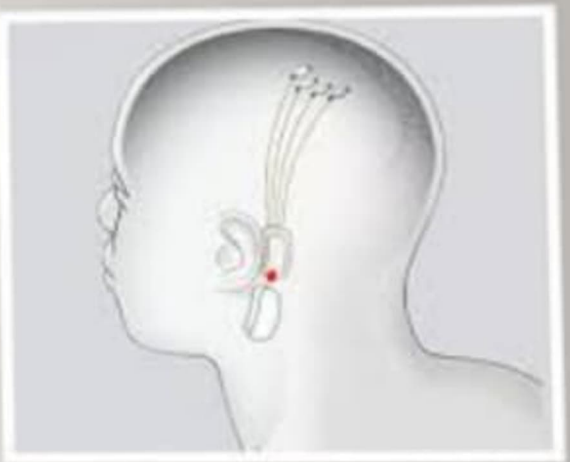
What is the purpose of the Neuralink chip?

Neuralink #goals

The **chip**, which **Neuralink** calls the “Link,” will wirelessly connect the brain to the digital world, starting by connecting to a smart phone. The resulting computing power, according to Musk, will allow humans to be broadly competitive with rapidly developing AI.

MUSK'S NEURALINK BRAIN CHIP

Elon Musk plans to start wiring people's brains to the internet this year with his Neuralink startup



Neuralink revealed plans to use lasers to shoot holes in skulls and feed threads of electrodes into the human brain

Once implanted, the chip could connect your brain waves to an app and may be able to help people with neurological conditions

How much will Neuralink chip cost?

But it **does** still require brain surgery. This surgery, promised to take less than an hour, is almost completely done by an automated robot, also designed by **Neuralink** — at an estimated initial **cost** of $10-20 million.

Can Neuralink be hacked?

And in the most severe scenario, **hacking** a **Neuralink**-like device **could** turn "hosts" into programmable drone armies capable of doing anything their "master" wanted.

Is Neuralink dangerous?

Is **Neuralink** potentially **dangerous**? It is bunch of a wires that goes into your brain with a wireless interface. The wires create electric pathway from your ear to your motor cortex, and body might not like the wires or the implant. So, yes.

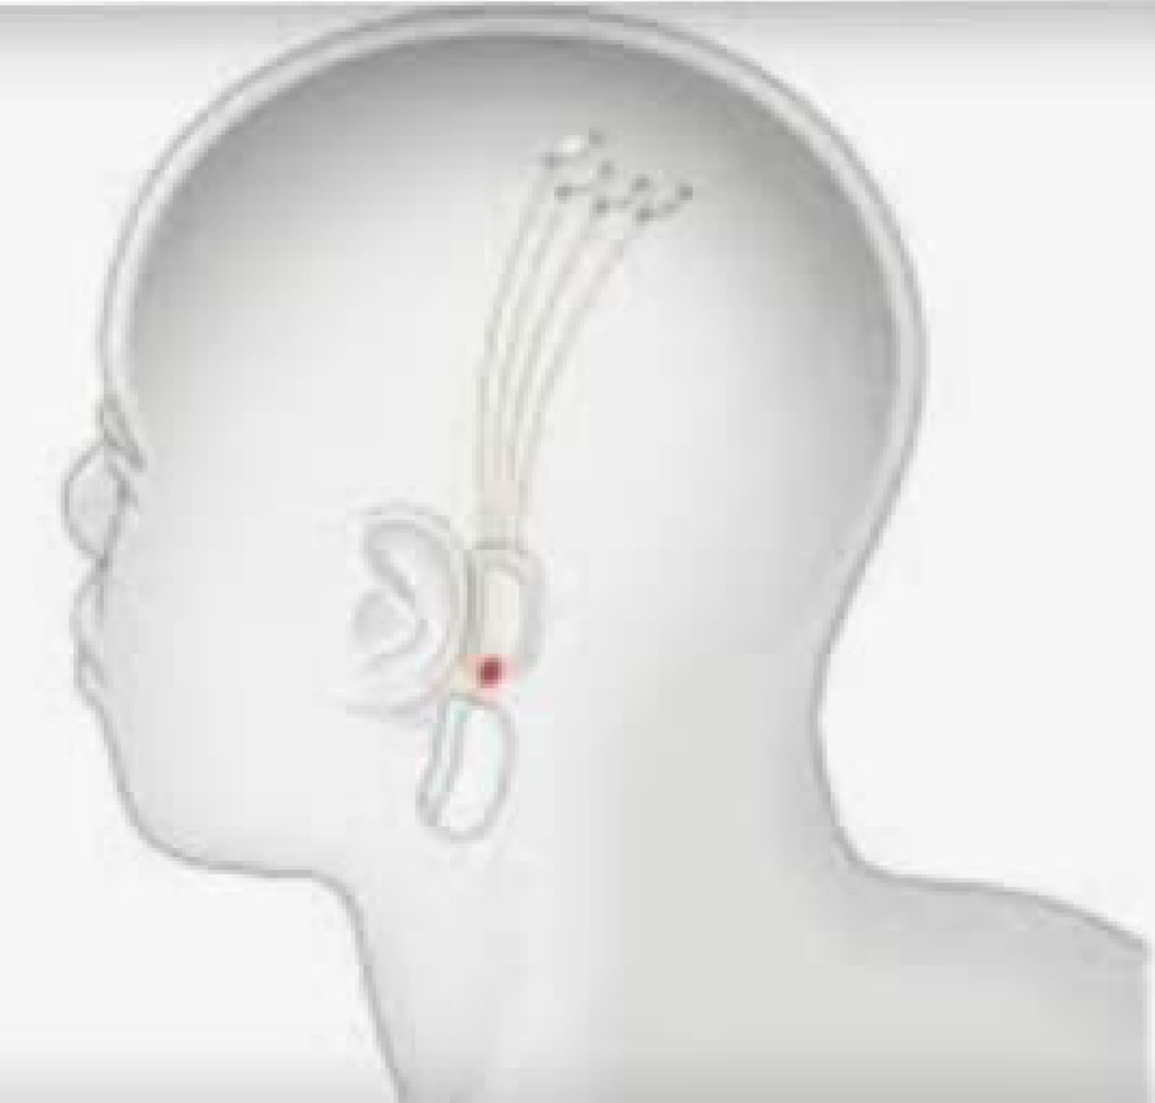
Can Neuralink cure blindness?

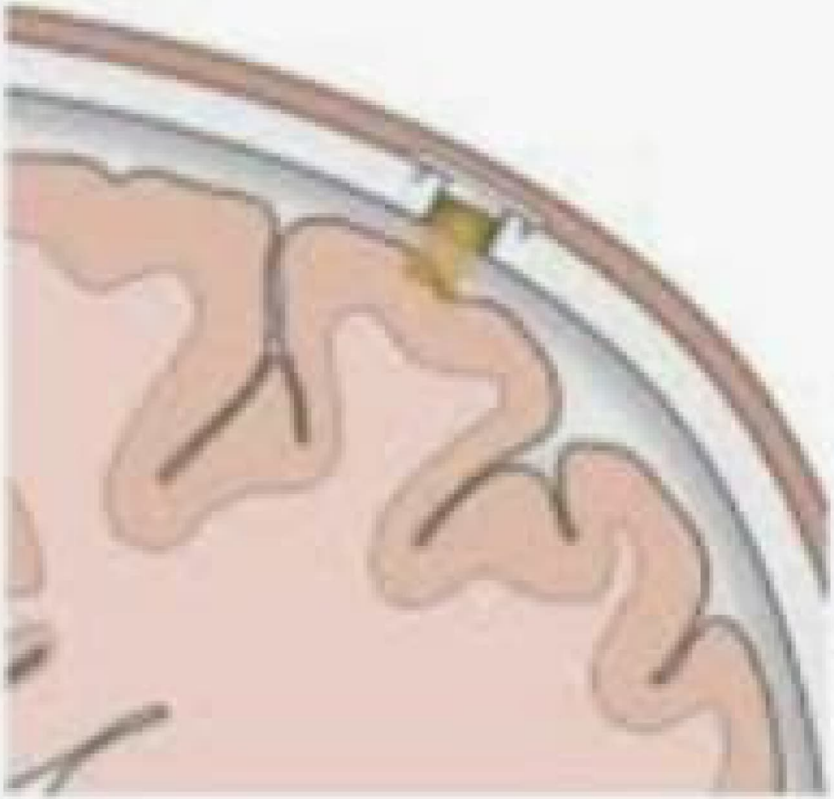
Scientists prepare human trials of 'bionic eye' which links directly to a chip in the brain and **could cure blindness** - and beat Elon Musk's **Neuralink** to market. It has been more than 10 years in the making, but scientists are preparing to implant a 'bionic eye' in a human subject.

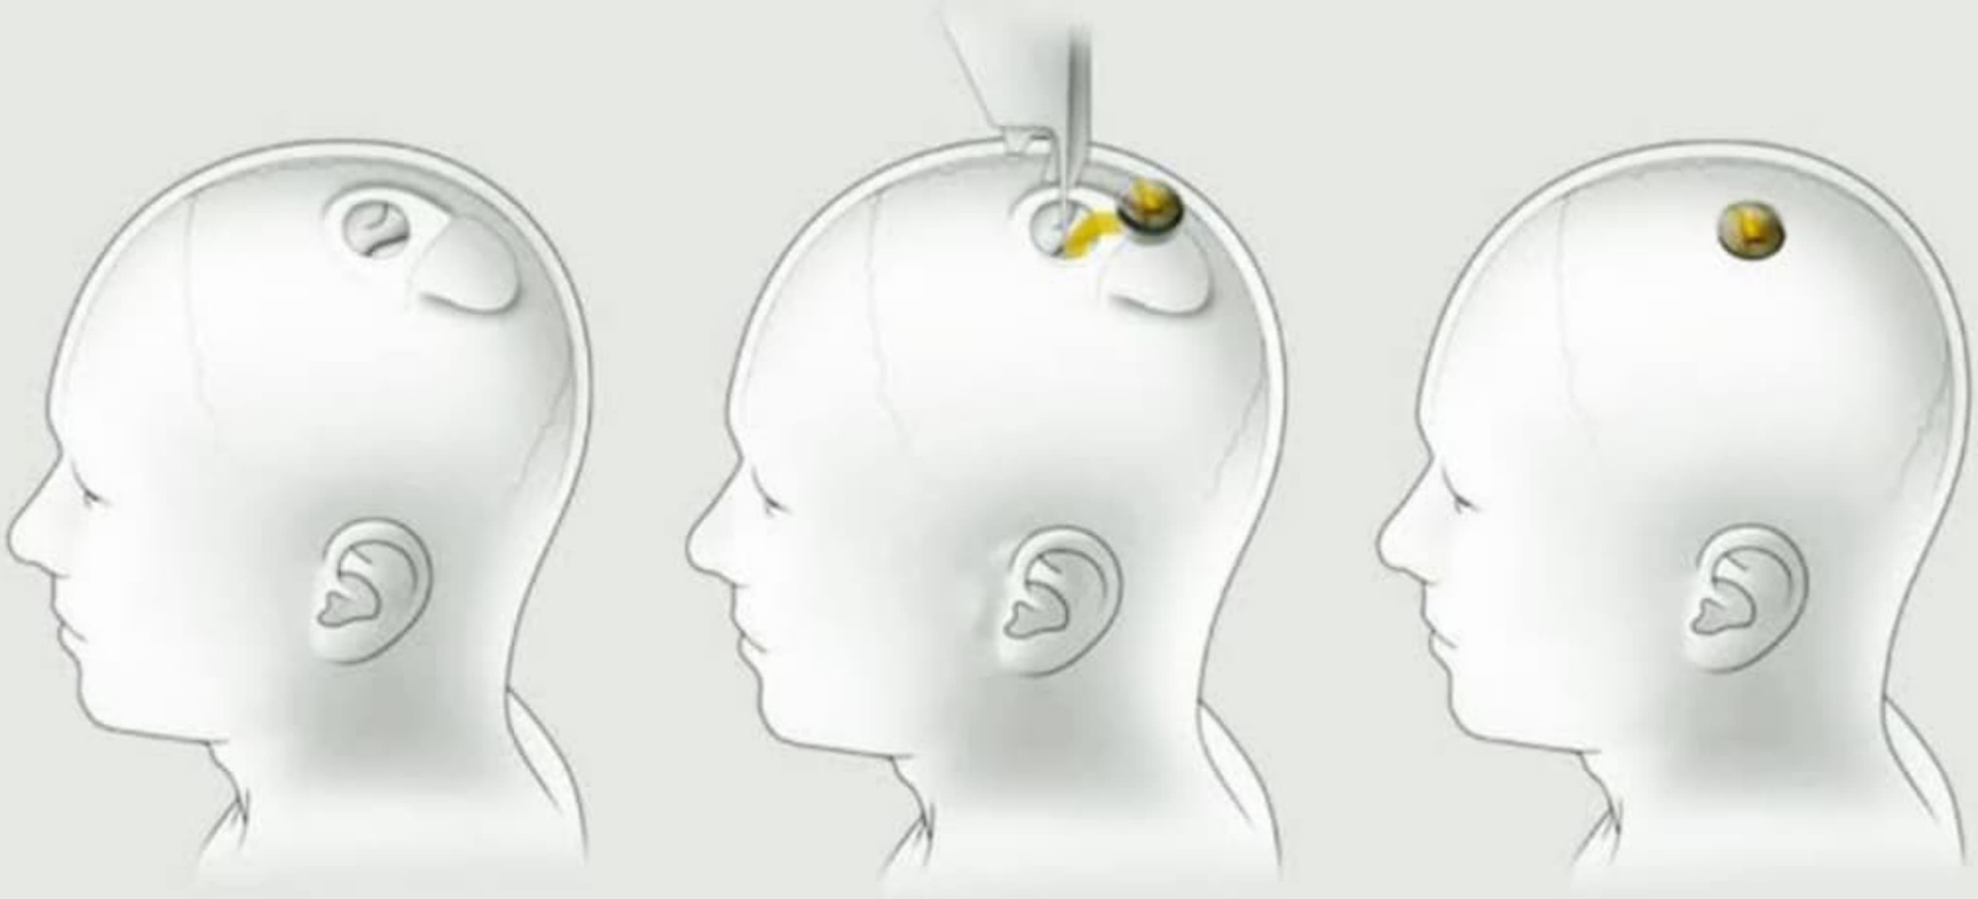
How do brain chips work?

Brain Cells and Silicon **Chips** Linked Electronically:

Today, many researchers are **working** on tiny electrode arrays that link the two. However, once a device is implanted the body develops so-called glial cells, defenses that surround the foreign object and prevent neurons and electrodes from making contact.





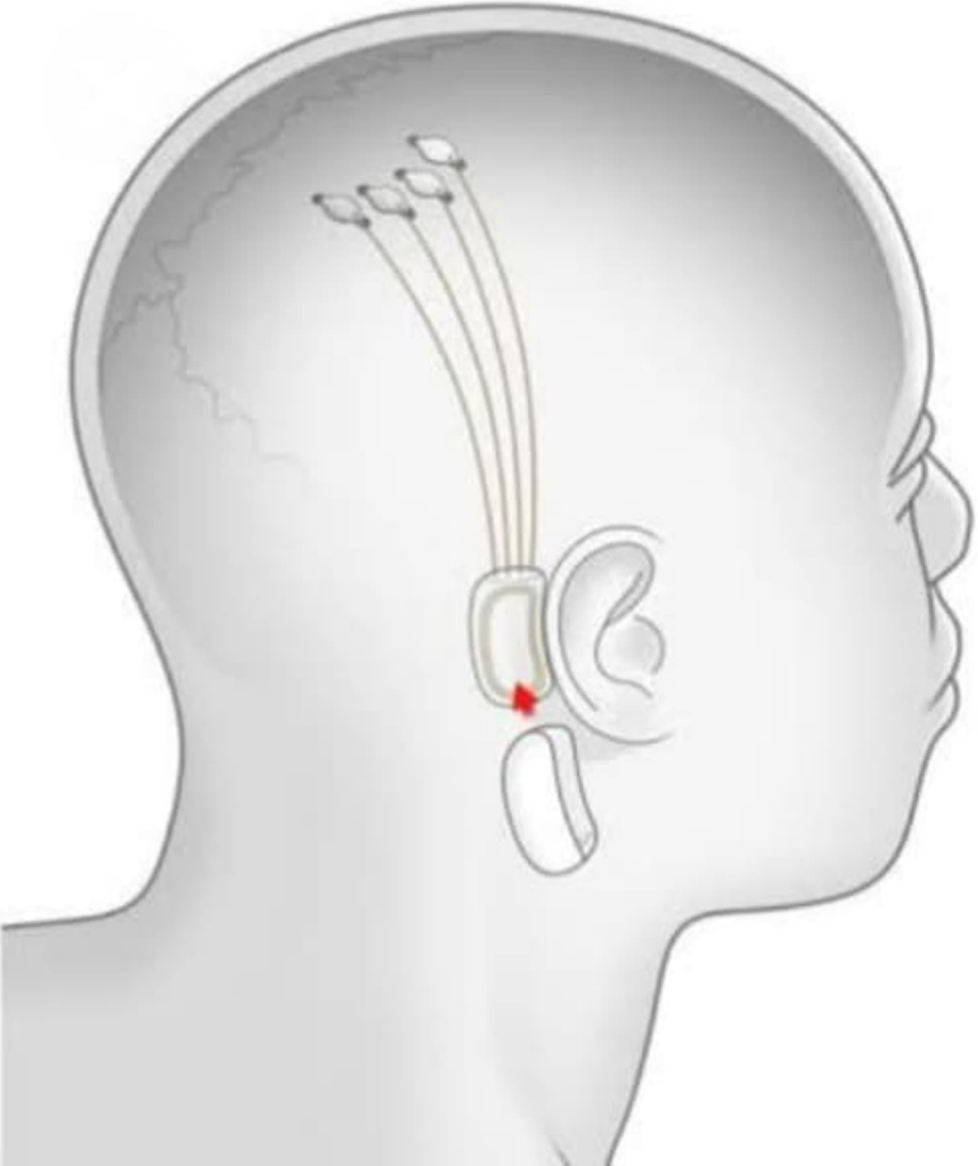


What is Elon Musk's new company?

Neuralink

One them, he says, he started to one day achieve "symbiosis" between the human brain and artificial intelligence. **Neuralink** is Musk's neural interface technology company.

On August 28, **Musk** livestreamed a demo of a **working Neuralink** device implanted in the brain of a pig named Gertrude. The device was embedded in Gertrude's skull, with wires fanning out into her brain with electrodes capable of detecting, recording, and theoretically even stimulating brain activity.



How does Elon Musk brain chip work?

"It's like a Fitbit in your skull," the SpaceX and Tesla leader says of Neuralink's **brain**-computer link technology. Neuralink's **brain**-machine interface technology sinks electrodes into the **brain** then uses a **chip** to communicate with computers outside your skull. 29-Aug-2020

Can Neuralink cure addiction?

The electrodes are thin, flexible, and **can** be implanted with a novel “sewing” robot, making it possible to install thousands of electrodes without disturbing brain tissue. Even with these improvements, **Neuralink** won't be able to **cure** psychiatric brain disorders like **addiction** and depression. 22-Jan-2021

What computer does Elon Musk use?

MacBook

He clearly has a **MacBook** at home, from the photo from his book. He also seems to use something more sophisticated or powerful for his graphics (the large screen likely isn't the computer itself, and for all we know the CPU is a Mac Mini or some other desktop version connected to an external monitor).

LINK V0.9

1024 channels per Link

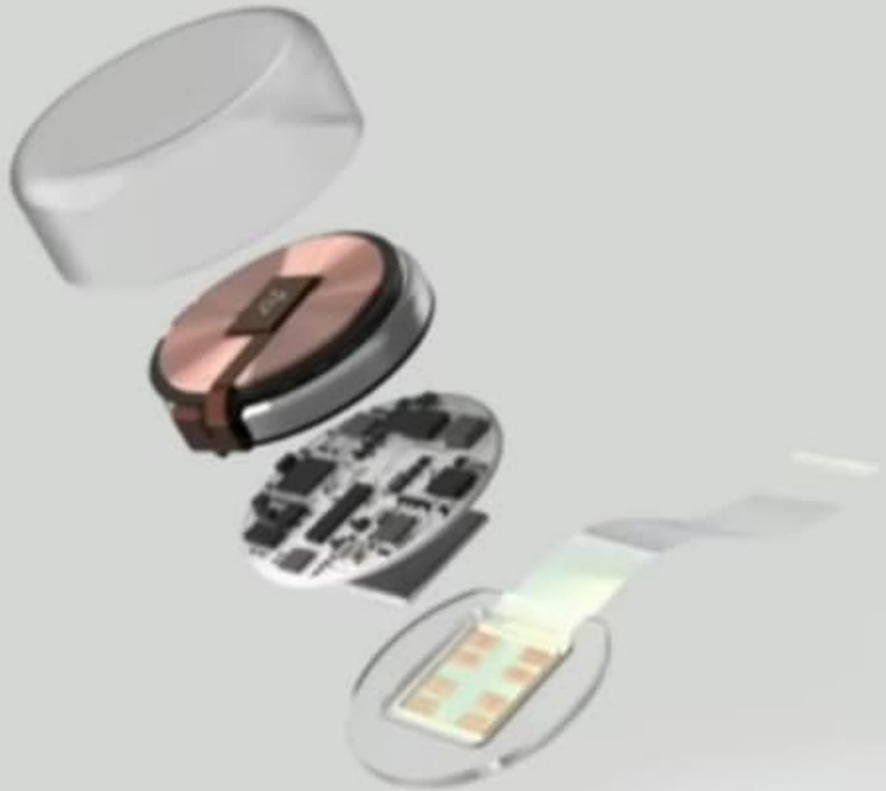
23 mm x 8 mm

Flush with skull (invisible)

6-axis IMU, temperature, pressure, etc.

Megabit wireless data rate, post compression

All day battery life



c|net

READ & WRITE ON EVERY CHANNEL

Channels	1,024
Battery life	All day
Recharging time	Overnight
Wireless range	5 - 10 meters
Implant size	23 mm x 8 mm
Look	Not externally visible

c|net

INDUCTIVELY CHARGED

What is Elon Musk's IQ?

around 155

What is **Elon Musk's IQ**? It's estimated that **Elon Musk's IQ** is 155 – though an exact number is not known, at least publicly. Based on a previous aptitude test that he's taken and his various abilities, it is generally accepted that his **IQ** is around 155. 06-Oct-2020
